

Eye Clinic North®

Thinking about LASIK?

Schedule a free LASIK Consultation to see if LASIK is right for you. The maze of LASIK advertisements and choices can be overwhelming. Our doctors are knowledgeable about the evolution of refractive surgery technology and surgeon experience across the state throughout the last 30 years. Our goal is to provide a personalized experience with the very best visual outcome and the highest level of safety for every patient. To do so requires technology and surgeon experience that is simply not available locally. OVO LASIK + Lens is a premier state-of-the-art surgery center with a world-renowned surgeon, Dr. Lobanoff, right here in Minnesota. Patients of Eye Clinic North enjoy an exclusive \$500 off discount on LASIK at OVO. Visit eyeclinicnorth.com and ovoeye.com for more information.

The doctors at Eye Clinic North provide local consultative, preoperative and postoperative care for 12 months and honor OVO's Lifetime Assurance policy. Lifetime Assurance means you have committed partners, Eye Clinic North and OVO, to stand beside you and honor free LASIK "Touch-ups" to maximize your best vision potential through life.

In later years, as cataracts develop, the Lifetime Assurance will be extended to ADVANCED LENS OVO patients to optimize post-cataract surgery vision with a Laser Vision Correction touch-up.

Have you been told you are not a LASIK candidate? Technology is powerful and ever-changing. During your free evaluation, our doctors will discuss how advanced laser technology may benefit you and discuss other refractive surgery options such as Evo ICL, Light Adjustable Lens, or Refractive Lens Exchange.

Topography-Guided Bladeless LASIK (both eyes)	\$3,990 \$3,490 (\$500 discount)
Minnesota Provider Tax	1.6% (approx)
Prescription drops (\$45), OTC lubricant drops (\$40)	\$85
Eye Clinic North's local services with Lifetime Assurance	<u>\$500</u>
	\$4,130.84

The above \$500 is due to Eye Clinic North upon booking surgery. Balance is due to OVO upon arrival. OVO's fees may be updated without notice but will be confirmed. If you have not had an eye exam within the last 2 years, we recommend starting with a comprehensive eye exam where LASIK will be discussed. Ask us about price-matching.

Zero reasons to go elsewhere for LASIK!

Eye Clinic North® Expectations for LASIK or PRK

Pre-Op LASIK CANDIDACY EXAM (Complimentary)

Our doctors at Eye Clinic North will use advanced equipment to evaluate your eyes to determine if you are a good candidate.

Evaluation includes measurements of corneal topography, corneal thickness, infrared pupil measurements, refractive status with three different techniques, and an assessment of internal and external eye health. The doctors will discuss the procedure, expectations, risks, benefits, and answer questions you may have.

Surgery PREOPERATIVE INSTRUCTIONS - 60 min

At OVO, the surgeon will verify and review pre-operative data with state-of-the-art equipment. Relaxing in your personal LASIK suite, you'll be given valium and all of the instructions and support to assure you are comfortable and your procedure goes smoothly and comfortably.

LASIK PROCEDURE - 10 min (Actual procedure time - 2 min per eye)

Using the most advanced technology in the world, Dr. Lobanoff walks you through the procedure step-by-step along with his team of some of the most experienced ophthalmic assistants in the industry.

IMMEDIATE RECOVERY - 2-6 hrs

You will be instructed to rest on the way home with your eyes closed. Continue resting when you get home and sleep through any initial burning or scratchy feeling.

Post-Op POSTOPERATIVE VISITS - 15 min

You'll see one of our doctors on your first day post-op. Many patients feel their vision is clear enough to drive themselves in and return to work. Typical follow-up visits are scheduled at 1 day, 1 week and 6 weeks. All related visits are covered for 12 months + Lifetime Assurance. Routine eye care is recommended every 1-2 years after surgery and will be billed separately.

RECOVERY

Avoid swimming pools, hot tubs, contact sports, and eye makeup for 1 week. Most people choose to take the first post-op day off from work, but that is optional. Your vision will continue to settle in and clear within the upcoming weeks and months.
